- ❖ Phone: +598 98100448
- ❖ Email: santidu200@gmail.com
- ❖ Birthday: 02/09/1999
- ❖ Current company: [Flow Labs](#)

Social Media

- ❖ [GitHub](#)
- ❖ [Linkedin](#)

Projects

- ❖ [Spoken](#) (Flutter, Firebase): This is a social network where you can share your product experiences with your friends.
- ❖ ReelQuest (Flutter, Firebase), ([App Store](#), [Play Store](#)): This app was created so that participants in fishing tournaments can view real-time information about the tournament they are participating in, as well as rankings, past tournaments, registration for future tournaments, and more.
- ❖ Foxsys (Flutter), ([App Store](#), [Play Store](#)): Foxsys offers a remote concierge service, and with this app, users can open the building's door, generate codes for others to enter the building, open the garage, view cameras, and more.
- ❖ [Real-time Audio Bot](#) (Python, Azure, OpenAI): The idea behind this product is to avoid using a real operator for basic tasks such as opening a door. This allows operators to dedicate their time to solving more complex tasks. Based on what the person says, the bot requests different data. For more information about this product, visit the website.
- ❖ [UBILD and UBILD Crew](#) (React Native, Laravel): These are two apps made with React Native. One is for employers, and the other is for employees. Employers—people with construction projects—need to carry out construction work at different locations and require personnel to do so. To find workers, they post their

jobs on the app. In the backend, a worker is selected according to the requested characteristics, and the employee is notified—through their respective app—of the time, place, and work to be done.

- ❖ [Altavista](#) (Laravel, Livewire): This website is an e-commerce platform for opticians (sellers of glasses, contact lenses, frames, sunglasses, lenses, etc.). From the public view, you can only access the public catalog—sunglasses and prescription lenses—and some other sections.
- ❖ [Image Assist](#) (Flutter): Doctors use this app to take pictures of the body of their patients. The app uses the AI model ([Movenet](#)) with tensor flow flite.

Personal Projects

- ❖ Contact+ (Flutter), ([App Store](#), [Play Store](#)): It's a simple a simple app to manage the contacts of the phone. This app is available in the App Store and the Play Store (need 20 testers to production).

Experience

- ❖ Full Stack Developer | [Flow-Labs](#) | April 2021

Languages

- ❖ Spanish - Native
- ❖ English - B2

Education

- ❖ Bachelor of Computer Science | UDE | Started 2021 | At present.
- ❖ Computer Analyst | UDE | Started 2019 | [Finalized](#)

Complement

- ❖ [Curso de Data Science](#) | Coderhouse | Started 2023 | [Finalized](#).
- ❖ [Jóvenes a Programar](#) | Plan Ceibal | Started 2020 | [Finalized](#).

Technologies and knowledge

- ❖ Mobile: React Native, Dart, Flutter, BLOC

- ❖ Backend: Node, Laravel, Python, Digitalocean, Lambdas, Docker, Laravel, ChatGPT, WebSocket, MySql, MongoDB, Redis
- ❖ Frontend: Javascript, React, Redux, Livewire, Bootstrap
- ❖ Cloud: Firebase
